

It is a valuable resource to be able to check weather and traffic conditions BEFORE getting into the local area. On a recent trip from our home in KY to Chicago we did just that and found that there were significant "jams" due to road construction on our primary route. We took an alternate route and everything was fine. Traffic and weather is a public service often addressing safety issues and should have no place in the NAB's campaign to control what we can hear. Please reject NAB's Petition 04-160. Thank you for your consideration.
